Chu The Manh

Fullstack Developer

Dob: 14/01/1999

Gender: Male

Phone: 0345574951

Email: themanhchu99@gmail.com

Address: 66B Trieu Khuc , Tan Trieu, Thanh Tri, Ha Noi

OBJECTIVE

- **4+ years** of software engineering experience with a strong focus on **Fullstack Development (ReactJS / Node.js)**.
- Passionate about building robust, high-performance enterprise applications and establishing code standards.
- A proactive team player aiming to leverage technical expertise and problem-solving skills to transition into a **Technical Leadership** role.

EDUCATION

2017 - 2021

Ha Noi University of Industry

Major: Information Technology

- GPA: 3.1 / 4.0

WORK EXPERIENCE

07/2021 - Present

FPT Software

Full-stack Developer

- Delivered enterprise-level Fullstack solutions across diverse domains (FinTech, SaaS, Web3) for global clients, strictly adhering to high standards of the Japanese market.
- Architected scalable frontend foundations, led legacy-to-modern system migrations, and successfully delivered complex features across multiple stacks (React, Vue, Angular, Node.js).
- Acted as a technical key member by conducting rigorous peer code reviews, driving system performance optimizations, and mentoring junior developers within Agile/Scrum environments.

04/2021 - 07/2021

Startup Company

Intern Front-End Developer

- Developed UI components using ReactJS and integrated RESTful APIs to deliver foundational web functionalities.

PROJECTS

01/2025 - Present

Financial Middleware Integration Hub

Fullstack Developer

Team Size: 20 | **Domain:** FinTech (HongKong)

Tech Stack: ReactJS, TypeScript, Node.js, REST APIs, Ant Design, SQL Server

Responsibilities & Achievements:

- **Frontend Setup & UI Library:** Built the base folder structure, common CSS, and reusable UI components. This helped the 20-member team code faster and keep the design consistent.
- **UI Performance:** Improved React rendering logic to smoothly display **10,000+ rows** of financial data on the screen without lagging or freezing.

- **Backend & Query Optimization:** Rewrote complex database queries and optimized backend API flows. Successfully reduced data processing time from **12s to 5s per record**, ensuring stable syncing for large data.
- **Data Pipeline:** Developed Node.js backend jobs to pull raw data from internal systems, format it, and push it to external partners.
- **Security & Auth:** Implemented SSO Login and Role-Based Access Control (RBAC) for both React frontend and Node.js backend to secure sensitive financial workflows.

06/2024 - 12/2024

Digital Adoption Platform (Browser Extension & CMS)
Fullstack Developer
Team Size: 15 | **Domain:** SaaS (Vietnam)
Tech Stack: Angular, ReactJS, Vanilla JS/CSS, NestJS**,** TypeScript**,** MariaDB
Responsibilities & Achievements:

- **System Migration & Architecture:** Led the migration of the Admin CMS to the latest Angular version. Architected and developed the backend using **NestJS**, implementing a scalable **Multi-tenant architecture** with a highly granular **Role-Based Access Control (RBAC)** system.
- **Browser Extension Ecosystem:** Built a dual-component extension system: developed a configuration 'Studio' using pure HTML/CSS/JS, and engineered a **React-based extension injected into host websites** to dynamically render and execute interactive user tutorials.
- **Complex Data Processing & Visualization:** Wrote complex backend algorithms in NestJS to calculate and aggregate massive user interaction logs. Optimized API payloads to seamlessly power **Sankey charts** on the frontend, visualizing intricate user traffic patterns.
- **Backend & Database Optimization:** Designed relational database schemas and optimized complex backend queries. Handled high-volume CRUD operations efficiently while ensuring strict data isolation and performance across all tenant environments.

06/2024 - 09/2024

Simulation Platform (2nd Job)
Fullstack Developer
Team Size: 27 | **Domain:** EdTech (Korea)
Tech Stack: ReactJS, Tailwind CSS, **Node.js, Express, SQL Server**
Responsibilities & Achievements:

- **End-to-End Feature Delivery:** Acted as a full-stack developer for assigned modules, independently handling both the React frontend development and the corresponding Node.js/Express backend APIs.
- **Email Notification Module:** Developed the full CRUD workflow for email configurations. Built the React UI to manage templates and wrote standard backend REST APIs to save and retrieve recipient rules from SQL Server.
- **Operational Dashboard:** Built monitoring dashboards using React and Tailwind CSS to display job statistics. Wrote straightforward backend controllers and services to query simulation data and serve it to the frontend charts and data tables.
- **Team Collaboration:** Worked closely within a large 27-member Agile team. Handled basic database interactions, ensured data validation across the API layer, and conducted regular peer code reviews to maintain UI consistency.

01/2023 - 06/2024

Blockchain-Based Data Processing & Transaction Platform
Fullstack Developer
Team Size: 20 | **Domain:** Blockchain (Korea)
Tech Stack: Node.js, MariaDB, Docker, Vue.js, jQuery/AJAX, Bootstrap
Responsibilities & Achievements:

- **Monolithic Architecture & Infrastructure:** Engineered a backend-driven monolithic architecture. Configured **Docker** environments for stable deployment and utilized pure **Node.js** to directly manage, bundle, and serve the frontend application assets (bypassing modern bundlers like Vite/Webpack).
- **Core Backend & Blockchain Logic:** Developed robust, pure Node.js backend services to handle core business logic and interact securely with the blockchain network (validating transactions and triggering smart contracts).
- **Database Management:** Designed and managed relational database schemas using **MariaDB** to store user roles, authentication data, and off-chain transaction logs securely.
- **Hybrid Frontend Integration:** Developed responsive UI modules (Transaction Management, Analytics Dashboard). Successfully integrated modern **Vue.js** reactivity into a traditional stack, utilizing **Bootstrap** for styling and **jQuery/AJAX** for asynchronous data fetching and DOM manipulation.

02/2022 - 01/2023

Accounting Web Application

Front-end Developer

Role: Front-end Developer | **Team Size:** 500+ | **Domain:** Accounting (Japan)

Tech Stack: ReactJS, TypeScript, Redux, SCSS

Responsibilities & Achievements:

- **Module Ownership in Enterprise System:** Owned the frontend development for two critical modules (**Tax Calculation** and **Accounting Calendar**) within a massive 500+ member enterprise project.
- **Complex UI/Logic Implementation:** Built highly dynamic tax input forms using React and TypeScript. Handled complex client-side logic including real-time computations, dynamic tax rates, and strict validation rules.
- **Component Architecture:** Architected a reusable UI component library based on the **Atomic Design** methodology (Atoms, Molecules, Organisms). This heavily improved code maintainability and UI consistency across the massive application.

07/2021 - 02/2022

Web-Based Banking System

Front-End Developer

Team Size: 60 | **Domain:** Banking & Financial (Japan)

Tech Stack: JSP, JavaScript, HTML/CSS, Java, Spring Boot, VBA

Responsibilities & Achievements:

- **Legacy UI Development:** Developed and maintained strict banking UI modules using **JSP, HTML/CSS, and JavaScript**, ensuring seamless integration with the Java/Spring Boot backend.
- **Quality Assurance Tools:** Demonstrated versatility by maintaining and optimizing internal automation testing tools using **VBA and Java**, which significantly reduced manual QA efforts.
- **Team Onboarding:** Acted as a mentor for new developers, guiding them on project architecture, strict coding standards, and Japanese banking business logic.

04/2021 - 07/2021

Startup Company

Intern Front-End Developer

Tech Stack:: ReactJS, JavaScript, HTML/CSS, Git

Responsibilities & Achievements:

- Gained hands-on experience in analyzing and understanding existing **ReactJS** source code within a real-world project structure.

- Mastered fundamental React concepts, specifically focusing on **Component Lifecycles** and **Class Components**.
- Acquired practical proficiency in using **Git** for version control and basic source code management.

CERTIFICATIONS

Udacity (03/2024)	Intermediate Python
Udacity (09/2024)	React
EnglishScore (10/2023)	British Council 466
Udacity (10/2023)	Front End Web Developer

SKILLS

Frontend	JavaScript (ES6+), TypeScript, React.js (Redux, Hooks), **Angular**, **Vue.js**, Next.js, HTML5/CSS3, Tailwind CSS, SASS/SCSS, **Chrome Extension API**, **Data Visualization (Sankey, Charts)**.
Backend	Node.js, NestJS, Express, Microservices Architecture, RESTful API
Database	MySQL, PostgreSQL, Redis (Caching & Performance Optimization).
Architecture & Core Concepts	**Atomic Design**, System Migration, Data Integration (PULL/PUSH jobs), Clean Architecture.
Tools & Version Control	Docker, CI/CD, Git, AWS/Google Cloud (Basic).
Testing	Unit Testing (Jest), Automation Testing maintenance (VBA, Java).
AI Integration	Automating workflows (Docs-to-Code, Code-to-Test) using GitHub Copilot and AI Agents.

OTHER SKILLS

- Problem-solving skills
- Self-research and self-learning skills
- Communication skills
- Teamwork skills

INTERESTS

Playing sports like badminton or football.
