Chu The Manh

Fullstack Developer

Dob: 14/01/1999

Gender: Male

Phone: 0345574951

Email: themanhchu99@gmail.com

Address: 66B Trieu Khuc , Tan Trieu, Thanh Tri, Ha Noi

OBJECTIVE

- 4+ years of experience, specializing in frontend development using ReactJS and TypeScript, with experience building highly scalable enterprise web applications.
- Satisfy customer with sufβicient services in professional way.
- Good logical thinking.
- Improving technical skills and English.
- Long term purpose is to become a Technical Leader or Fullstack Developer.
- Complete all assigned work with high quality, support other members in the project.

EDUCATION

2017 - 2021

Ha Noi University of Industry

Major: Information Technology

- GPA: 3.1 / 4.0

WORK EXPERIENCE

07/2021 - Present

FPT Software

Full-stack Developer

- Acted as a core Front-End and Full-Stack Developer across diverse enterprise-level projects spanning multiple domains (FinTech, Banking, SaaS, Web3/Blockchain, EdTech) for global clients, including the strict Japanese market.
- Spearheaded frontend architectures, established base UI layouts, and led system migrations (legacy to modern stacks) ensuring seamless transitions and high maintainability.
- Demonstrated strong adaptability by mastering and delivering complex features across multiple frameworks (ReactJS, Angular, Vue.js) and backend environments (Node.js/Express).
- Took on leadership responsibilities by conducting peer code reviews, optimizing system performance, and mentoring junior members to accelerate team productivity within Agile/Scrum environments.

04/2021 - 07/2021

Startup Company

Intern Front-End Developer

- Completed an intensive training program focused on modern web development.
- Acquired hands-on experience by analyzing existing project source code and mastering ReactJS fundamentals (Component Lifecycles, Class Components).
- Successfully delivered foundational CRUD functionalities and gained practical proficiency in Git version control for source code management.

PROJECTS

01/2025 - Present

Financial Middleware Integration Hub
Fullstack Developer
Client / Domain: HongKong / FinTech - System Integration
Team Size: 20 members
Technologies: ReactJS, TypeScript, Tailwind CSS, Node.js, Express, REST APIs
Project Description:
Developed a centralized middleware integration hub designed to seamlessly synchronize financial data across multiple internal systems and external partners. The platform incorporates comprehensive user management, strict access controls, and complex financial workflows such as FX (Forex) contract management.

Responsibilities & Achievements:

- **Frontend Architecture & UI Setup:** Established the foundational frontend architecture by setting up the base layout and building a robust library of reusable UI components. This streamlined the development process, enabling team members to consistently and rapidly deliver complex business modules (e.g., FX, Contracts).
- **End-to-End Security & Auth:** Designed and implemented complete Authentication workflows (Standard Login & **SSO**) and Role-Based Access Control (**RBAC**) across both frontend and backend. Effectively managed token/session lifecycles, protected routing, and rigorous permission enforcement.
- **Backend Data Integration:** Engineered robust backend integration jobs (Node.js) to aggregate (PULL) raw data from multiple upstream systems, normalize it, and dispatch (PUSH) the processed data to downstream partners via REST APIs.
- **Performance Optimization:** Analyzed and optimized the execution flows of data integration jobs. Successfully reduced processing time and enhanced system stability, ensuring reliable synchronization of high-volume data.
- **Code Quality Assurance:** Conducted comprehensive peer code reviews to enforce coding standards, ensure UI/UX consistency, and maintain a highly scalable codebase across both the React frontend and Node.js backend.

01/2024 - 12/2025

Digital Adoption Platform (Browser Extension & CMS)
Front-end Developer
Client / Domain: VietNam / SaaS - Digital Adoption
Team Size: 15 members
Technologies: ReactJS, Angular, TypeScript, JavaScript, HTML/CSS, Chrome Extension API
Project Description:
Developed a comprehensive Digital Adoption Platform (similar to Whatfix) designed to streamline user onboarding and system navigation through intuitive in-app tutorials. The system comprises a powerful centralized Content Management System (CMS) and a dedicated browser extension.

Responsibilities & Achievements:

- **System Migration Leadership:** Spearheaded the frontend migration of the platform from a legacy architecture to a modernized stack. Ensured 100% feature parity and a seamless transition experience for existing enterprise users without operational disruption.
- **CMS & Administration UI:** Designed and developed robust management interfaces using **Angular & TypeScript** for core administrative modules (Users, Roles, Sites, Content, Tags, and Folders), implementing advanced data tables, complex filtering, and complete CRUD operations.

- **Chrome Extension Development:** Built a feature-rich **Chrome Extension** UI using **ReactJS** that mirrored core CMS functionalities. This empowered users to configure, manage, and execute tutorial workflows directly within their active browser environment.
- **Advanced Data Visualization:** Integrated backend services to power data-driven analytics dashboards. Successfully implemented complex **Sankey charts**—handling extensive data mapping, logic transformation, and dynamic rendering—to visualize user traffic patterns and workflow analysis.

03/2024 - 12/2024

Simulation Platform

Front-end Developer

Client / Domain: Korea / EdTech - Simulation & Training

Team Size: 27 members

Technologies: ReactJS, Tailwind CSS, REST APIs

Project Description:

Developed a dynamic web-based simulation platform that enables users to configure and interact with complex simulation scenarios for training and testing purposes. The system includes operational tooling to closely monitor simulation runs and deliver comprehensive data outputs.

Responsibilities & Achievements:

- **Email Notification Module:** Developed the UI for automated job-completion notifications. Built interactive screens to configure notification rules, manage recipient lists, and implemented a dynamic email template editor.
- **Operational Dashboard UI:** Built a comprehensive dashboard to monitor real-time simulation operations. Handled complex UI states for API-driven data, integrated data visualization (charts, data tables with advanced filtering), and created overview widgets/cards to display job statistics.
- **API Integration & Data Mapping:** Seamlessly integrated frontend modules (Email & Dashboard) with backend REST APIs. Effectively mapped request/response data models and managed loading/error states to ensure a smooth user experience.
- **Code Quality & Collaboration:** Conducted regular peer code reviews for team members to enforce UI consistency, optimize Tailwind CSS utility classes, and maintain high coding standards.

01/2023 - 09/2024

Blockchain-Based Data Processing & Transaction Platform

Fullstack Developer

Client / Domain: Korea / Blockchain - Distributed Systems

Team Size: 20 members

Technologies: Node.js, Vue.js, AJAX, Bootstrap, HTML/CSS

Project Description:

Developed a distributed web application utilizing blockchain technology to facilitate secure data processing, transaction execution, and network management.

Responsibilities & Achievements:

- **Backend & Architecture Setup:** Developed robust backend services and REST APIs using **Node.js** to handle core business logic, interact with the blockchain network (transactions, smart contracts), and manage user authentication/roles. Configured the Node.js server to build and serve the frontend application directly.
- **Frontend Development:** Translated Figma designs into responsive user interfaces for key modules including Transaction Management, Smart Contracts, and the Analytics Dashboard using **Vue.js**, **HTML/CSS**, and **Bootstrap**.
- **System Integration:** Seamlessly connected the frontend UI with backend workflows using **AJAX** requests, enabling real-time data fetching, transaction submissions, and dashboard metric visualization.

- **Quality Assurance & Agile:** Conducted regular peer code reviews to enforce coding standards and ensure codebase maintainability. Worked actively in an **Agile/Scrum** environment, cooperating closely with QA and other engineers to ensure continuous sprint progress and reliable product delivery.

06/2022 - 01/2023

Accounting Web Application
Front-end Developer
Client / Domain: Japan / Accounting
Team Size: 500+ members
Technologies: ReactJS, TypeScript, Redux, SCSS
Project Description:
Developed a large-scale, web-based accounting system designed to streamline data entry, financial processing, and comprehensive financial management for enterprise-level businesses.

Responsibilities & Achievements:

- Collaborated closely with Business Analysts (BA) and Tech Leads to produce comprehensive screen designs for the **Tax Calculation** and **Accounting Calendar** modules. Defined UI/UX flows, data field specifications, strict validation rules, and error-handling scenarios.
- Developed and implemented the **Tax Calculation** screens using React and TypeScript. Built complex features including dynamic tax input forms, categorization of taxable/non-taxable items, tax rate selection, real-time computation, customizable rounding rules, and detailed summary dashboards.
- Architected and built a highly reusable UI component library (input controls, display components) following the **Atomic Design** methodology (Atoms, Molecules, Organisms) using SCSS and Redux. This initiative significantly improved code maintainability and ensured UI/UX consistency across the entire application.

07/2021 - 06/2022

Web-Based Banking System
Front-End Developer
Client / Domain: Japan / Banking & Financial Services
Team Size: 60 members
Technologies: JavaScript, HTML, CSS, JSP, Java, Spring Boot, SQL Server, VBA, Eclipse
Project Description:
Developed and enhanced the user interface for a large-scale banking system tailored for the Japanese market. The project focused on delivering a highly secure, user-friendly experience while strictly complying with complex financial business requirements.

Responsibilities & Achievements:

- **UI Development & Integration:** Developed, customized, and maintained banking UI modules using **JSP, JavaScript, HTML, and CSS**. Seamlessly integrated frontend interfaces with the **Java/Spring Boot** backend to meet strict business requirements from Japanese clients.
- **Automation Testing Maintenance:** Maintained and optimized internal automation testing tools utilizing **VBA** and **Java**, which significantly improved testing efficiency, minimized manual QA effort, and ensured high product quality.
- **Mentorship & Onboarding:** Acted as a mentor to onboard and train new project members. Provided guidance on project architecture, coding standards, and business logic to rapidly accelerate their productivity.
- **Agile Collaboration:** Worked in an **Agile/Scrum** methodology, participating in daily stand-ups and sprint plannings to ensure continuous delivery and adaptation to client requests.

04/2021 - 07/2021	**Startup Company** **Intern Front-End Developer** **Role:** Frontend Intern **Technologies:** ReactJS, JavaScript, HTML/CSS, Git **Responsibilities & Achievements:** • Gained hands-on experience in analyzing and understanding existing **ReactJS** source code within a real-world project structure. • Mastered fundamental React concepts, specifically focusing on **Component Lifecycles** and **Class Components**. • Developed and implemented essential **CRUD** (Create, Read, Update, Delete) functionalities to interact with data. • Acquired practical proficiency in using **Git** for version control and basic source code management.

CERTIFICATIONS

Udacity (03/2024)	Intermediate Python
Udacity (09/2024)	React
EnglishScore (10/2023)	British Council 466
Udacity (10/2023)	Front End Web Developer

SKILLS

Frontend	JavaScript (ES6+), TypeScript, React.js (Redux, Hooks), **Angular**, **Vue.js**, Next.js, HTML5/CSS3, Tailwind CSS, SASS/SCSS, **Chrome Extension API**, **Data Visualization (Sankey, Charts)**.
Backend	Node.js, Express.js, NestJS, **Java, Spring Boot**, RESTful APIs, **JWT & SSO Authentication**, **Role-Based Access Control (RBAC)**.
Database	MongoDB, SQL Server, Mongoose, good knowledge of Relational and NoSQL database design.
Architecture & Core Concepts	**Atomic Design**, System Migration, Data Integration (PULL/PUSH jobs), Clean Architecture.
Tools & Version Control	Git, GitHub, Postman, Figma, Docker, Agile/Scrum.
Testing	Unit Testing (Jest), Automation Testing maintenance (VBA, Java).

OTHER SKILLS

- Problem-solving skills
- Self-research and self-learning skills
- Communication skills

- Teamwork skills

INTERESTS

Playing sports like badminton or football.
